Corning® Varioptic® C-S-25H0-038 Auto Focus Lens Module

Overview
The Corning® Varioptic® C-S-25H0-038 auto focus lens module integrates a fixed lens module with a Corning® Varioptic® A-25H0 variable focus lens in an M12x0.5 receptacle (S-mount). The C-S-25H0-038 has an FPC cable and can be connected to a standard 1 mm pitch FPC connector. It can be easily integrated with a standard M12 sensor board. The C-S-module is compatible with imaging sensor formats up to 1/3”.

For more information on this module, please refer to the C-S-25H0-038 Technical Datasheet (TEDS).

Ordering Information
- **Corning® Varioptic® C-S-25H0-038-03 auto focus lens module**: 4-pin, 1 mm pitch, bent flex cable (FPC-A-3) without IR-cut filter
- **Corning® Varioptic® C-S-25H0-038-03I auto focus lens module**: 4-pin, 1 mm pitch, bent flex cable (FPC-A-3) with IR-cut filter
- **Corning® Varioptic® C-S-25H0-038-06 auto focus lens module**: 4-pin, 1 mm pitch, bent flex cable (FPC-A-6) without IR-cut filter
- **Corning® Varioptic® C-S-25H0-038-06I auto focus lens module**: 4-pin, 1 mm pitch, bent flex cable (FPC-A-6) with IR-cut filter
- **Corning® Varioptic® C-S-25H0-038-07 auto focus lens module**: 4-pin, 1 mm pitch, straight flex cable (FPC-A-7) without IR-cut filter
- **Corning® Varioptic® C-S-25H0-038-07I auto focus lens module**: 4-pin, 1 mm pitch, straight flex cable (FPC-A-7) with IR-cut filter

Performance Summary
- Effective focal length: 3.85 mm
- F number: 2.2
- Image circle diameter: 6.1 mm
- Focus range: -7 cm to infinity

Example of Applications
- Videoconferencing
- Medical imaging
- Industrial endoscopes

Contents
- Opto-Electrical Performance
- Electrical Specifications
- Absolute Maximum Ratings

Electrical Specifications

Electrical Connection

The following FPC connectors are compatible with the FPC tip:

- SFW4S-2STE9LF from Amphenol FCI
- 04FMN-BTK-A (LF)(SN) from JST

Notes:

(1) Measured at a frequency of 1 kHz and a voltage of 1 V and 20 V.
(2) Adjustable lens current only – does not include the driver.

Driver

Several drivers have been qualified for use with Corning Varioptic variable focus lenses (See A-25H Data Sheet). The customer should choose the driver depending on its application. It is important to check the resolution of the driver compared to the depth of field of the system. See driver datasheets for more details.

Module Setting Recommendations

Use caution when configuring the initial lens module settings. Although the user has complete control over module configuration settings, only a limited number of configurations will provide optimum image quality.

Setting Procedure without Voltage:

Here is a simple procedure to set the C-S-25H0-038 module for a 7 cm to $\infty$ usage:

1. Set a scene at a distance of at least 5 m from the camera.
2. Insert and slightly screw the C-S-module on the M12 camera lens holder (C-S-module unpowered).
3. The image should be out of focus.
4. Screw the C-S-module clockwise until the center of the image becomes sharp.
5. From this position, screw the C-S-module clockwise an additional 1/2 turn with accuracy of $\pm$ 1/8 turn: the image becomes out of focus again.
6. Fix the C-S-module in this position.
7. Power the C-S-module: the infinite focus will be obtained for $V_\infty$ and the focus at a closer position will be obtained by applying a higher voltage, up to $V_{\text{max}}$.

To use the C-S-25H0-038 module for a maximum focus of distance $x_0$, modify the above steps:

1. Set a scene at a distance of $x_0$ from the camera.
2. Power the C-S-module: the focus at $x_0$ will be obtained for $V_\infty$ and the focus at a closer position will be obtained by applying a higher voltage, up to $V_{\text{max}}$.

With this setting, the minimum object distance is reduced from 7 cm to:

$$\frac{1}{14 + \frac{1}{x_0}}$$

in meters, with $x_0$ in meters.

Setting Procedure with Voltage:

1. Connect the C-S-module to the driver and adjust the voltage control to 39.5 V$_{\text{rms}}$
2. Turn on the camera, and point the camera in the direction of a scene that is at least 5 m from the module, or at a distance of $x_0$ if using at the maximum focus distance $x_0$.
3. Screw the C-S-module clockwise until the image becomes sharp.
4. Optional: Block the C-S-module in that position.
